Question 1 I need to know what a "synthetic solvent" is. For example, I want to make an extraction of the salt from a salt water solution. And then I want to work up to a good solvent. Question 2 What is the Difference between Acetone and N-propanol? What makes them different? Acetone is the solvent that we use in reactions that are involved in making lipsticks. N-propanol is the solvent that you use in making carpet cleaning solutions. Question 3 What is a good solvent and a bad solvent? A good solvent dissolves the active ingredient in a solution and a bad solvent does the opposite. A good solvent would be N-propanol

and a bad solvent would be acetone. Question 4 What are good solvents and bad solvents? A good solvent would be N-propanol and a bad solvent would be acetone. Question 5 What is the difference between a good solvent and a bad solvent? A good solvent would be N-propanol and a bad solvent would be acetone. Good solvent Dissolves the active ingredient in a solution Bad solvent does the opposite What are good solvents and bad solvents? A good solvent would be N-propanol and a bad solvent would be acetone. Good solvent Dissolves the active ingredient in a solution Bad solvent does the opposite What are good solvents and bad solvents? A good solvent would be N-propanol and a bad solvent would be acetone. Question 6 Which of these solvents is an inert solvent? What are inert solvents? An inert solvent is one that is not chemically reactive, so it doesn't react with any other material. It is safer to use. Acetone is one example. Question 7 Which of these solvents is a good solvent? What are good solvents? A good solvent is one that dissolves the active ingredient in a solution. N-propanol is a good solvent. Question 8 Which of these solvents is a bad solvent? What are bad solvents? A bad solvent is one that doesn't dissolve the active ingredient in a solution. N-propanol is a bad solvent. Question 9 Which of these solvents is an inert solvent? What are inert solvents? An inert solvent is one that is not chemically reactive, so it doesn't react with any other material. It is safer to use. N-propanol is one 82157476af
